

G120 - Oracle 11i System Administration

Course Objectives

This comprehensive course provides students with a thorough appraisal of the techniques involved in the functional management of the Oracle 11i ERP suite.

Introducing the concepts behind 11i Functional Administration, the class explores the deployment options available using the System Administration features, the technology stack involved with delivering thin-client ERP Applications and its functional integration, and the full range of products and technologies that can be integrated through the deployment of the Oracle 11i ERP Suite.

These include an overview of System Administration tasks, Security Features, Flexfield Configuration, and Module Family Setup options.

Who Should Attend	Prerequisites	Duration
Technical Consultants System Implementers System Integrators Support Technicians Maintenance Technicians Upgrade Technicians Documentors System Administrators Data Administrators	None	3 Days
